Synopsis:

India as a nation, and nations across the world are trying hard to decarbonise the respective economies. We are focusing on gaining carbon neutrality in steps before 2070. The various facets of life of ours will have to be reimagined, readied, and redone in hitherto unknown ways. Coming years, especially the time till 2030 and what we do from now on will decide how our children can cope with the coming climate collapse. Since 1977, awareness programs on energy conservation are organised in India with several action programs going along with them. Yet, the global warming is tagging us close to 1.2 deg C affecting the whole 8 billion people of the world.

Recipient of 2019 Life Time Achievement Award of Kerala Govt. for energy conservation and promotion of renewable energy systems, Prof. V.K Damodaran, will launch a discussion on this year's energy conservation day at IE Kerala State Centre on the need to redefine Conservation to facilitate the country's move towards Carbon Neutrality.
